

# How Artiffine Stores Hundreds of Gigabytes of NFT Collection Data on IPFS with Filebase

## Introduction

---

As a creative agency, [Artiffine](#) specializes in constructing Web3 projects for a diverse range of brands and creators. Artiffine's services include custom smart contracts, web and app design, legal analysis and agenda, and content creation for NFT collection creators.

## About Artiffine

---

Artiffine offers a comprehensive solution that encompasses all aspects of a Web3 project, starting from the initial planning stages until after the launch. They provide a wide range of services, including Web3 strategy and concept consultation, legal analysis and compliance, full-scale custom development, marketing, and content creation.

To store hundreds of gigabytes of data on IPFS for their clients, Artiffine needed a reliable, resilient IPFS pinning provider to assure that all NFT metadata files are available long-term.

## Artiffine's Use-Case

---

"As a creative agency building NFT projects for a wide variety of clients, we need to pin gigabytes upon gigabytes of data to IPFS regularly, and we don't have time for half-baked solutions. Any solution that we use for our clients needs to be consistent, rock-solid, and built to last. We need to be able to guarantee that the metadata associated with the NFT projects we are building will stay pinned to IPFS long-term."

- *Evan Vischi, Artiffine*

## Important Attributes That Contributed To Artiffine Choosing Filebase

High Data Availability  
and Resiliency

Easy-To-Use Web  
Console Interface

Flexible Workflows Using  
The S3-Compatible API

---

## The Filebase Solution

Filebase offers a geo-redundant IPFS pinning service that allows you to pin files to IPFS across multiple diverse geographic locations. All files uploaded to IPFS through Filebase are automatically pinned to the Filebase infrastructure with 3x replication across the globe. This ensures that your data is globally available and redundant at all times.

“When we came across Filebase, we were so amazed at the straightforward interface, the flexibility, and the price point, that we were almost certain there would be a catch. **There wasn't.**

It completely covered all of the bases for what we wanted in a decentralized storage solution, for much less than other solutions, and we knew we had to switch over immediately. And so we did, and haven't looked back.”

– *Evan Vischi, Artiffine*
